

ST - SF001

Designed for markets, such as motorcycle and sports, where high impact energies are experienced.

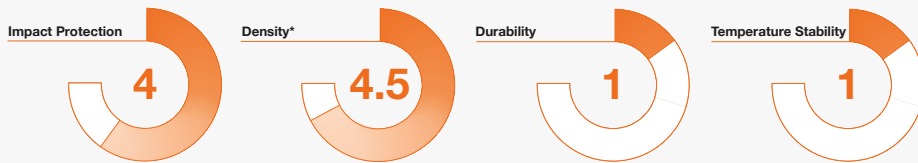

XTi - SF005

Soft, flexible and lightweight impact protection frequently used for motorcycle limb protectors and sport.

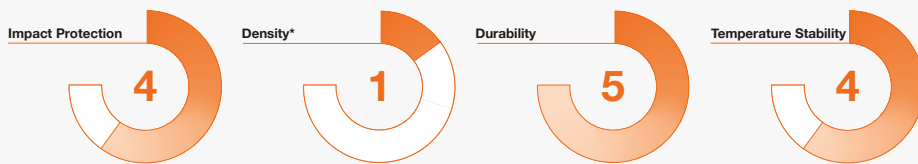

Aero - SF010

A more lightweight version of ST, frequently used for helmet liners and back protectors.

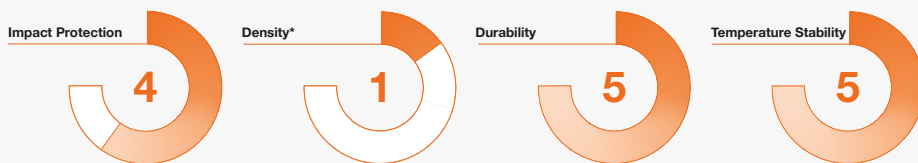

SE004

SE004 can be engineered into structures and designs that offer unrivalled shock absorption and achieve a thinner, more detailed impact protection layer.

TPE - FE002

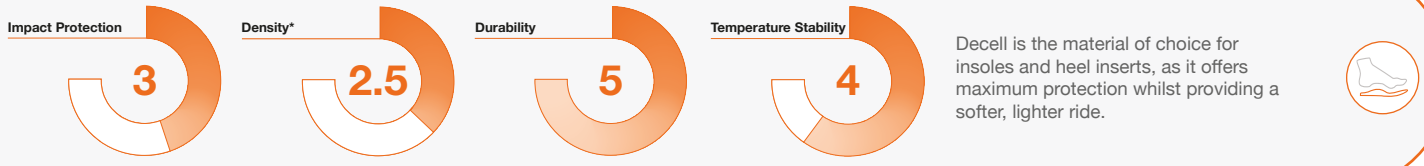

The D30[®] Formable Elastomer range has been developed for injection moulding, specifically consumer electronics cases.

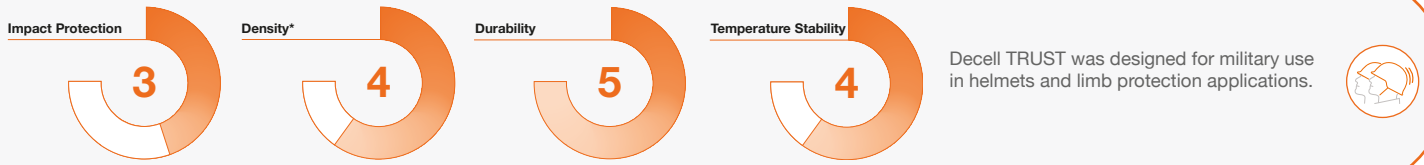

*The higher the density score the less dense the material is (5 is the least dense material).

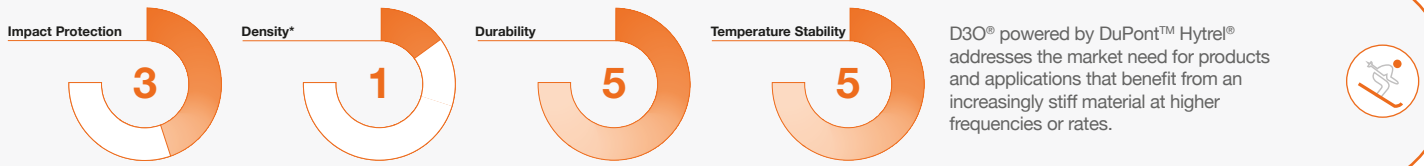

Decell B - SF007

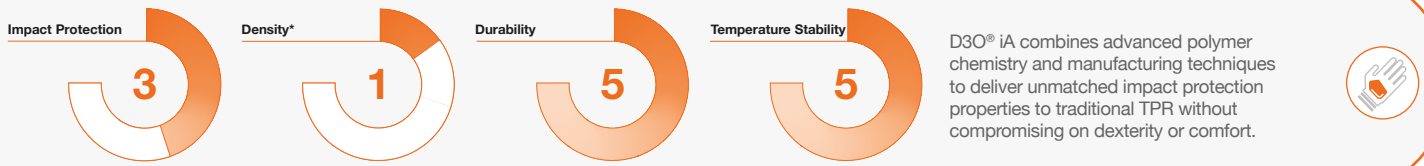

Decell TRUST - SF019

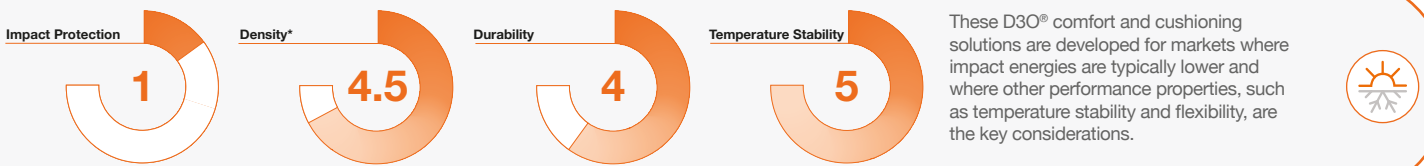

D30[®] powered by DuPont[™] Hytrel[®] - FE003

Impact Additive (iA)

LITE Foams A-E - FF001 - FF005

*The higher the density score the less dense the material is (5 is the least dense material).
